ALOK KR. PATEL

PRINCIPAL PRODUCT MANAGER | AGENTIC AI • AI WORKFLOWS • ENTERPRISE SAAS

North Carolina, USA | 607-242-1908 | patel.alok.kr@gmail.com | U.S. Permanent Resident | LinkedIn

EXECUTIVE PROFILE

Product leader with 18+ years building software products and translating ambiguous customer problems into scalable, measurable experiences. Led 0→1 AI-powered search, personalization, support agents, and reusable enterprise AI capabilities across a $20–25M ARR SaaS portfolio. Works closely with engineering, data science, design, and executive stakeholders to define hypotheses, shape user workflows, and balance LLM quality, trust, latency, reliability, and cost. Brings hands-on technical fluency in RAG, agent orchestration, Python, SQL, APIs, and product analytics, with a track record of shipping AI capabilities to real users.

BUSINESS IMPACT AT A GLANCE

$20–25M ARR portfolio supported | 40% fewer support tickets | Up to 70% engagement lift | 20% CAC reduction

PRINCIPAL-LEVEL CAPABILITIES

Agentic AI & LLM workflows • AI product discovery and MVPs • RAG and context-aware retrieval • Human-in-the-loop workflows • Evaluation criteria and telemetry • Model quality, latency and reliability tradeoffs • Workflow automation • AI unit economics • Experimentation and product analytics • Platform APIs • Cross-functional product strategy

PROFESSIONAL EXPERIENCE

COTIVITI | Technical Product Manager, Healthcare Analytics | May 2026–Present

- Drive AI product strategy and roadmap execution for healthcare analytics and medical intelligence platforms, translating complex clinical, payer, and regulatory requirements into scalable, high-value product capabilities.
- Spearhead agentic AI workflow initiatives and personally prototype AI-agent interactions using Python and LLM tooling, exploring task automation, human-in-the-loop review, and clinical workflow requirements before prioritizing production development.
- Lead development of AI-powered analytics and intelligent dashboards, enabling natural-language exploration, automated insight generation, and visualization of complex healthcare datasets to accelerate evidence-based decisions.
- Optimize LLM operational efficiency and unit economics by monitoring token consumption, evaluating context-window utilization, and refining prompt and workflow strategies to balance inference cost, latency, output quality, and reliability.
- Establish data-driven product evaluation practices using SQL, product telemetry, and measurable acceptance criteria to assess AI output quality, identify workflow bottlenecks, and prioritize improvements with engineering and data science partners.

WHETSTONES ASSOCIATES | Senior Product Manager, AI | Jun 2019–May 2026

- Owned AI product direction across a SaaS portfolio supporting approximately $20–25M ARR, partnering with CTO/CPO leadership to prioritize high-value workflow opportunities, MVP scope, and investment tradeoffs.
- Led 0→1 discovery and launch planning for Dhurba, integrating LLM-enabled discovery, recommendations, personalization, and payment journeys into an end-to-end customer workflow.
- Defined reusable LLM, RAG, and multi-agent workflow capabilities, including evaluation criteria and telemetry; partnered with engineers on retrieval quality, hallucination risks, latency, reliability, and cost-to-serve tradeoffs.
- Used customer behavior and product analytics to refine AI-driven discovery and personalization, contributing to 20% lower customer acquisition cost and up to 70% higher engagement.
- Launched a multichannel OpenAI-powered support agent with intent classification, context-aware responses, and automated routing; reduced support ticket volume by 40% while designing around response quality and escalation needs.
- Advanced Saralbooks, Monetix, and SubsPlus through discovery, MVP scoping, workflow design, pricing, and subscription monetization; connected technical capabilities to adoption and commercial value.

SMARTMOBE PVT. LTD. | Senior Product Manager | Mar 2018–Apr 2019

- Led a data-informed redesign of enterprise onboarding and personalization journeys, identifying adoption friction and improving user engagement by 40% and lead conversion by 25%.
- Launched customer-facing AI-driven personalization capabilities for paying enterprise clients, using behavioral signals and recommendation logic; partnered with engineering to refine the experience and evaluate adoption and conversion outcomes.
- Led migration from legacy systems to a scalable subscription platform, balancing architectural tradeoffs, rollout risk, and customer continuity to reduce operational overhead by 30%.
- Introduced anomaly detection and automated exception-handling capabilities to reduce manual work and support scalable enterprise operations.

DIGILOKTA PVT. LTD. | Senior Product Manager, Fintech Platforms | Aug 2014–Mar 2018

- Shaped the 0→1 product vision for Vigya and Loan Engine, connecting KYC/AML, identity verification, loan origination, and underwriting into an integrated fintech workflow for financial institutions.
- Drove ML-assisted verification and workflow automation to streamline lending decisions, with reported loan approval turnaround improvements exceeding 50%; introduced loan lifecycle and portfolio monitoring to surface risk earlier.
- Balanced regulatory controls with borrower experience, simplifying onboarding while preserving auditable compliance workflows and risk-based decisioning.
- Supported fintech platform commercialization and operating efficiency initiatives associated with reported 40% ARR growth and 35% profitability improvement.

COTIVITI | Project Manager, Medical Intelligence | Sep 2012–Jun 2014

- Coordinated delivery of risk adjustment, clinical quality, and population analytics initiatives across a 15-person team and multiple engineering managers.

EDUCATION

Boston University | M.S. Artificial Intelligence
Kathmandu University | Bachelor of Engineering, Computer Engineering

TECHNICAL ECOSYSTEM

OpenAI • Azure OpenAI • AWS Bedrock / SageMaker • LLMs • RAG • Multi-agent systems • NLP • Python • SQL • REST APIs • AWS / Azure / GCP • Kafka • Spark • Tableau • Power BI • Jira / Confluence
